

IN THE CLAIMS

This listing of the claim will replace all prior versions and listings of claim in the present application.

Listing of Claims

1. (previously presented) A portable terminal comprising
a transmission part that transmits, to information provision equipment or a server, a signal indicating presence at a prescribed location, indicating presence of a communications counterparty at a prescribed location;
a reception part that receives from said information provision equipment or said server a signal indicating the position of a moving body indicating that a moving body is approaching or is present at said prescribed location;
an alarm part that issues an alarm, using the moving body in position signal received at said reception part, to indicate that said moving body is approaching or is present at said prescribed location;
a light detection part that detects the degree of brightness; and
a part that decides whether or not to transmit a signal present indication in prescribed location signal and that decides, using the brightness as detected by said light detection part, whether or not to send a present indication in prescribed location signal from said transmission part.
2. (original) A portable terminal according to claim 1 wherein said transmit decision part transmits a present in prescribed location signal from said transmission part when the level of brightness detected by said light detection part is below a fixed level.

3. (original) A portable terminal according to claim 2 wherein said fixed level can be set.

4. (original) A portable terminal according to claim 1 wherein said light detection part can be detached from the main body of the portable terminal.

5. (previously presented) A portable terminal comprising
a transmission part that transmits to information provision equipment or a server a signal indicating presence at a prescribed location, indicating presence of a communications counterparty at a prescribed location;
a reception part that receives, from said information provision equipment or said server, a signal indicating the position of a moving body indicating that a moving body is approaching or is present at a prescribed location; and
an alarm part that issues an alarm, using the moving body in position signal received at said reception part to indicate that said moving body is approaching or is present at said prescribed location,
wherein if said reception part receives a specified presence signal from a specified portable terminal informing that the specified terminal is present or in close proximity to said prescribed location, then said transmission part does not transmit a present indication in prescribed location signal.

6. (previously presented) An information provision system comprising:

- a first portable terminal;
- a second portable terminal that moves together with a moving body;
- information provision equipment; and
- a server,

wherein said first portable terminal and said second portable terminal each transmits moving speed information of said terminal to said information provision equipment,

wherein said information provision equipment notifies said server with said moving speed information that said first portable terminal is near said information provision equipment when said first portable terminal is near said information provision equipment, and

wherein said server uses said moving speed information, the current position of said information provision equipment and information on danger affecting said current position to notify said second portable terminal that said first portable terminal is in a region of danger.

7. (previously presented) An information provision system according to claim 6, wherein said moving speed information includes whether information indicating said first and second portable terminal is moving in a low speed or in a high speed.

8. (previously presented) An information provision system according to claim 6, wherein said server notifies danger to said second

portable terminal based on at least one of conditions selected from a location where accidents frequently occur including a construction site, changes in weather conditions, frequency of the occurrence of accidents and traffic conditions.

Claim 9 (canceled).
